# **INTRODUCTION**

This directory provides the names of individuals who possess qualifications to evaluate the energy use of buildings under the Schools, Hospitals, Local Government Buildings and Public Care Facilities Program (often called the schools and hospitals program, for short) of the National Energy Conservation Policy Act of 1978 (P.L. 95-619).

The schools and hospitals program will provide qualified institutions up to 50 percent of the funding for activities which reduce the consumption of energy from conventional sources. The Energy Division of the Montana Department of Natural Resources and Conservation (DNRC), 32 South Ewing, Helena, MT 59601, can tell you more about the program, whether your building qualifies, and how you can apply.

To apply for a grant from the schools and hospitals program, an institution must perform a preliminary energy audit (PEA) on its building. A PEA involves completing a questionnaire available from the DNRC Energy Division. The questionnaire covers such things as building size, type of fuel, and rate of energy use. Although you may contract an individual listed in this directory to perform a PEA, anyone familiar with the building can perform the audit.

When the building has been accepted into the schools and hospitals program, financial assistance will be provided to perform an energy audit (EA) which evaluates the energy efficiency of the building's operation and maintenance. An EA includes an examination of the building and a report that includes:

- 1) Operating changes or maintenance actions that might improve the building's energy efficiency;
- 2) Need for energy conservation measures that would require capital outlays; and
- 3) Initial assessments of the building's ability to use renewable energy.

DNRC encourages institutions participating in the program to have members of their staffs perform EAs, although individuals so indicated in the directory may be hired to perform EAs. The individual performing the EA must, however, attend a DNRC energy auditor training workshop (which is free) and cannot be the person who actually operates the building's systems involved in the EA. Several institutions may want to cooperate by sending a single individual to a workshop to qualify him to perform an EA on each institution's building.

An institution that implements the operation and maintenance actions suggested in the EA report is eligible for a technical assistance grant. Technical assistance involves a detailed professional analysis of a building which determines the potential for conserving energy and converting to a renewable energy source. Technical assistance may only be provided by a registered professional engineer or an engineer-architect team. In either case, they must have experience in energy conservation matters.

Although DNRC has verified that individuals listed in this directory who claim to be engineers or architects are licensed professionals, claims of experience made by these individuals have not been verified. DNRC cannot be held responsible for unsatisfactory service that might be provided by an individual listed in this directory. An institution that wants a professional to perform a PEA or an EA or provide technical assistance should contact several professionals, compare the ability and price of each, and select the auditor best suited to the institution's requirements.

The individual listings are arranged in this directory by city and the cities are arranged in alphabetical order.
